

May 2023 – Semester 2

**Laboratory 1: Network Topology**

**Thursday, May 18, 2023**

**Design a following network in Cisco Packet Tracer and write its advantages and disadvantages**

Necessary Equipment: PC's, Hub, Switch, Repeater and Connecting Wires.

**(Linear) Bus Topology:**

All nodes in the network are connected directly to a central main cable (aka backbone) running through the network.

Not popular in modern networking, dealing with large data amounts. Temporary setup.

**Advantages**

- Easy to connect nodes to network
- Less cabling compared to other topologies
- Small and Cheaper installation
- Failure of a single device does not affect the rest of the network.

**Disadvantages**

- The whole network fails if the backbone cable is broken
- Terminators must be installed at each end of the backbone
- One backbone increases chances of data collision
- As the number of devices increases, the network performance can slow down.
- It is challenging to identify and troubleshoot problems in the network.
- It has limited scalability, as adding new devices to the network is challenging.

**Design**

May 2023 – Semester 2

## Star Topology

Hubs can either be active or passive, with active hubs containing repeaters and passive hubs being classified as non-intelligent nodes. They are also found in home networks, especially those that are wireless.

### Advantages

- the data flow is centralized through the hub, reducing collisions and congestion on the network. This results in increased network performance and fast data transmission.
- it is easy to identify and isolate network problems, which makes it easy to troubleshoot and fix network issues.
- Adding new devices to the network can quickly expand, making it a flexible that can grow and adapt to changing network requirements.
- higher performance as a message is passed on to its intended node only

### Disadvantages

- If the hub or switch (central point of communication) fails, the entire network can be affected. relies heavily on the hub or switch
- requires more cabling and equipment than other network topologies, more expensive to install and maintain.
- As the number grows, the number of cables required can become unwieldy. limit the scalability of the network.
- setting up and configuring the cabling for an extensive network can be problematic. Proper planning and installation of cabling is crucial for ensuring network efficiency and effectiveness.

### Design

Sujal Ratna Tuladhar

BCS, January 2023, Section D Group 2

22013230 | 0362483

May 2023 – Semester 2

## Ring Topology

The devices are interconnected in a circular or ring-like pattern, which forms a closed loop. data is transmitted in one direction around the circle, with each device on the network reading and passing on the data until it reaches its destination.

## Advantages

- provides redundancy, meaning that transmitting data through the other devices in the loop is possible if one device fails
- each device has an equal opportunity to transmit data, helps to balance network traffic. reduces the risk of congestion and ensures equal bandwidth.
- data travels in one direction around the loop, no need for collision detection or retransmission of data.
- can easily scale up or down by removing or adding devices from the loop. This makes it a flexible option for networks that need to grow or shrink over time.
- data can only travel in one direction around the loop. more challenging for hackers to intercept data or inject malicious code into the network.

## Disadvantages

- the failure of a single device can disrupt the entire network. when a device fails to transmit data or the cable connecting breaks.
- limited in its support number. device must connect to the loop, determine the network's size.

Sujal Ratna Tuladhar

BCS, January 2023, Section D Group 2

22013230 | 0362483

May 2023 – Semester 2

- challenging to locate the source of the problem. in a circular loop, making it hard to pinpoint where the failure occurred.
- devices to the loop can also result in slow performance Data must travel through each device in the circle before reaching its destination.

## Design

## Mesh Topology

Network channels connect each node to all the other nodes. a point-to-point connection, supports two data transmission techniques: routing and flooding. The routing technique equips the nodes with routing logic, such as selecting the shortest distance path to the destination node or avoiding routes with broken connections. the flooding technique involves broadcasting the data to all network nodes, eliminating the need for the routing logic. While this technique enhances the network's robustness, it may also generate unwanted network traffic and result in a heavy load on the network.

## Advantages

- provides redundancy and multiple paths for data to travel between devices, one link fails, data can be rerouted, ensuring that the network remains operational
- accommodate new devices without disrupting the existing network. without affecting performance
- provides network design and topology flexibility. to suit the specific needs, connected in a full or partial configuration.
- provides a high level of security, making it difficult for attackers to intercept or disrupt the network.

Sujal Ratna Tuladhar

BCS, January 2023, Section D Group 2

May 2023 – Semester 2

## Disadvantages

- expensive. must connect every device in the network to multiple other devices. cabling, hardware, and infrastructure.
- complex to implement and manage, Users should use routing protocols and algorithms to drive traffic flow between devices. Failure detection and recovery mechanisms to ensure the network remains operational despite node failures.
- data travel through multiple nodes to reach destination, increasing latency and affecting network performance. problematic in applications with critical low latency, such as real-time communication or online gaming.
- In wireless, devices must transmit and receive data over the air, which can consume significant amounts of power. It can be a problem in applications with limited battery life, such as IoT sensors.

## Design

## Hybrid Topology

combining two or more different network topologies. Combines advantages of each topology to create a more robust and flexible network infrastructure.

## Advantages

- allows adding new network segments, making it easier to scale up or down as per the organization's needs.
- offers greater flexibility in network design, user can customize different segments to meet specific requirements.
- better redundancy and fault tolerance. one segment fails, network continue functioning through another segment.
- cost-effective because organizations can use existing infrastructure and add new technology only where necessary.

May 2023 – Semester 2

- can provide faster data transfer speeds, improved performance, and lower latency by selecting the most suitable topology for each network segment.

### Disadvantages

- more complex, requires knowledge and expertise to design,
- requires regular maintenance to ensure all network segments function correctly.
- time-consuming and costly if an organization lacks in-house IT expertise.
- more vulnerable to security threats, combining different segments with different security protocols and configurations, creating potential weaknesses that hackers can exploit.
- various technologies and protocols, making it challenging to ensure their compatibility. It can result in communication issues and performance problems.

### Design

May 2023 – Semester 2

Laboratory 2: Basic Network Configuration Command    Thursday, June 8, 2023

Design a LAN network to study basic network command and Network configuration commands. (ping, tracert and nslookup)

Necessary Equipment’s:

Router (1841), Switch (2960-24PT), 2 PCs and 2 Printers, Copper Crossover wires

Figure 1.Basic LAN network

IPv4 Configuration:

IP Addresses: to end devices

PC0	192.168.1.10	PC1	192.168.2.10
Printer0	192.168.1.11	Printer1	192.168.2.11

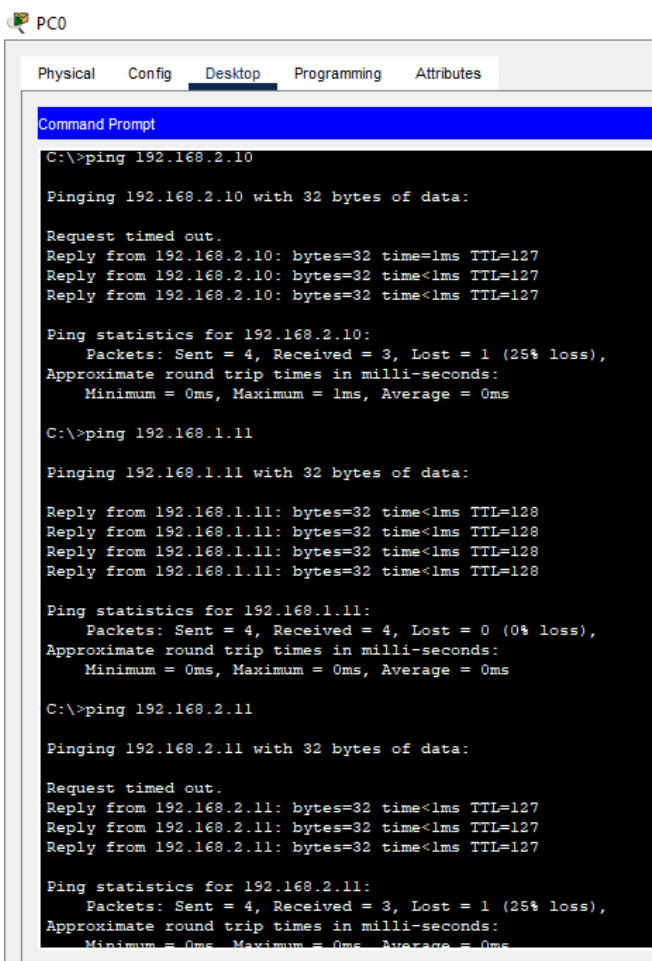

Default Gateway: to router

PC0 & Printer0	192.168.1.1	PC1 & Printer1	192.168.2.1
----------------	-------------	----------------	-------------

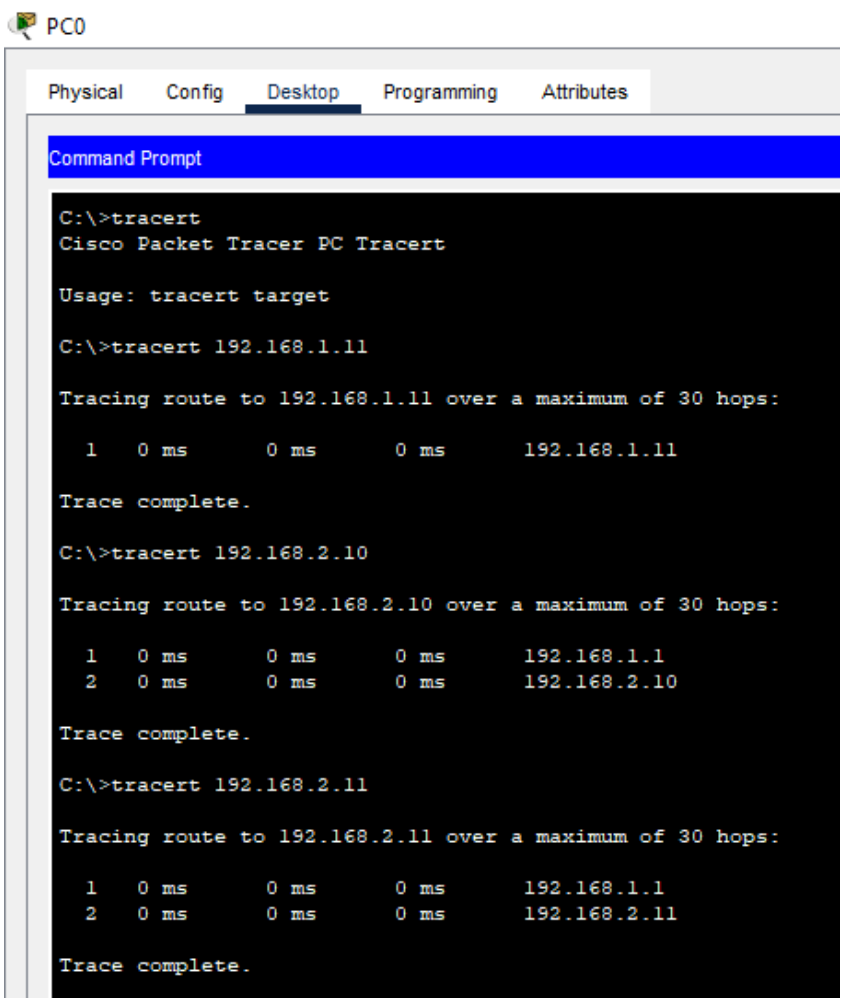

Subnet Masks: 255.255.255.0 (Class C)

May 2023 – Semester 2

**Ping:** Allows the user to send a signal to another device and check if its active and will respond back to the sender aka echo request and respond. To check internet connectivity issue

**tracert:** let the user see all steps a packet takes to the destination aka hops tracing to a specific route it hits to an intended servers

May 2023 – Semester 2

**nslookup:** fetch the DNS record for a given domain name or ip address stored in a DNS server allowing us to query the record to gather information's

```
C:\WINDOWS\system32>nslookup

May 2023 – Semester 2

Laboratory 3: Initial Switch and Router Configurations    Thursday, June 15, 2023

Design and Configure 2 different networks as Customer Network and ISP Network. Also mention the Router and Switch Name, Host Name, Interface Description, Banner, Both Console and Secret Password in Both Networks.

Note: Use the IP addresses as in the figure or you can use another IPs also. All the networking devices should communicate with each other.

Necessary Equipment's

2× 1841 Router's, 2× 2960-24TT Switches, 2× PC-PT's, 2× Server-PT's, 2× Connecting Cable Wires (Copper Straight Through, Serial, Console)

<div>For Customer Network:</div> <div>Router Name: Customer Router</div> <div>Host Name: Customer Router</div> <div>Password: Cisco123</div> <div>Secret: Cisco@123</div> <div>Switch Name: Customer Switch</div> <div>Host Name: Customer Switch</div> <div>Password: cisco123</div> <div>Secret: cisco@123</div>
--

For ISP Network:

Router Name: ISP Router

Host Name: ISPRouter-SujalRT

Password: rtsujal

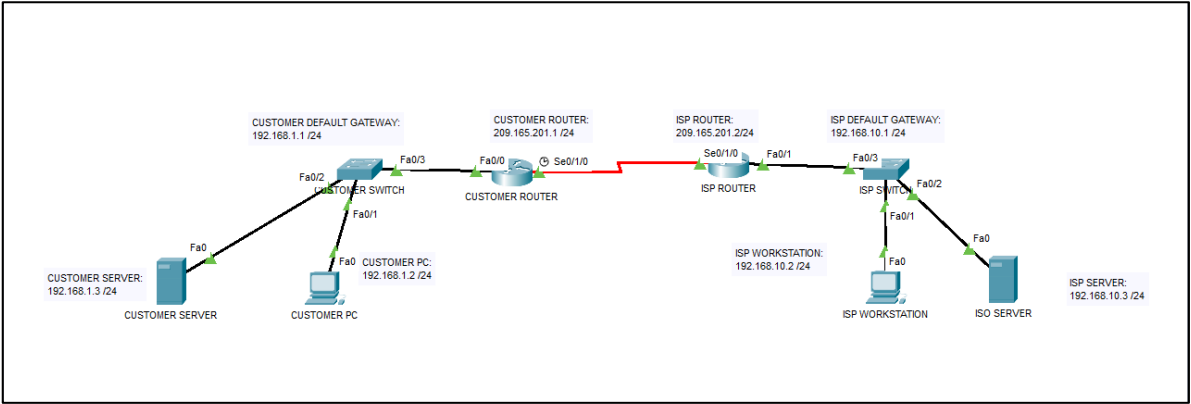

Secret: rt@sujal

Switch Name: ISP Switch

Host Name: ISPSwitch-SujalRT

Password: sujalrt

Secret: rtsujal@

May 2023 – Semester 2

Procedure:

- Took 2 PC’s, 2 switches, 2 server’s, 2 router’s
- Divided one of each device (network and end-user) to ISP and Customer sides
- Used copper straight through cable to connect end-user devices like pc and server to switch on both sides as well as switches to router
- Used serial cable to connect two routers, and console cable to connect pc directly to routers
- Managed the interfaces in the devices such as copper fast ethernet and serial ports.
- Manually entered the Static IP Addresses to each device on both networks
- Using IP Configuration on Desktop (GUI) PC and Server, Interface on Config Tab for Routers.
- Class C Private IPv4 on Customer Network (192.168.x.x) and Class C Public IPv4 on ISP Network
- Routers are connected with Class C PUBLIC IPv4 (209.165.20.x)
- Check internal connections and move on to IOS CLI of Switches and Routers.

Table

Customer Network:

Device	Port Interface	Cable	IP
Customer PC	Fa0	Copper Straight-Through	192.168.1.2/24
Customer Switch	Fa0/1		
Local Server	Fa0	Copper Straight-Through	192.168.1.3/24

May 2023 – Semester 2

Customer Switch	Fa0/2		
Customer Switch	Fa0/24	Copper Straight-Through	192.168.1.1/24
Customer Router	Fa0/0		(Default Gateway)

ISP Network:

Device	Port Interface	Cable	IP
ISP Workstation	Fa0	Copper Straight-Through	192.168.10.2/24
ISP Switch	Fa0/1		
ISP Server	Fa0	Copper Straight-Through	192.168.10.3/24
ISP Switch	Fa0/2		
ISP Switch	Fa0/24	Copper Straight-Through	192.168.10.1/24
ISP Router	Fa0/0		(Default Gateway)

Router:

Device	Port Interface	Cable	IP
ISP Router	Se0/0/0	Serial DCE	209.165.201.2
Customer Router	Se0/0/0	Serial DTE	209.165.201.1

May 2023 – Semester 2

## IOS CLI

### Customer Switch

CustomerSwitch(config)#line con 0

CustomerSwitch(config-line)#password cisco123

CustomerSwitch(config-line)#login

CustomerSwitch(config-line)#exit

CustomerSwitch(config)#enable secret cisco@123

CustomerSwitch(config)#exit

CustomerSwitch#copy run startup-config
```

### Customer Switch

```
Router>enable

Router#show running-config

Router#show startup-config

Router#configure terminal

Router(config)#hostname CustomerRouter

CustomerRouter(config)#banner motd $ !!! ONLY
AUTHORIZED USERS ARE ALLOWED !!! $

CustomerRouter(config)#lin con 0

CustomerRouter(config-line)#password Cisco123
```

May 2023 – Semester 2

```
CustomerRouter(config-line)#login  
  
CustomerRouter(config-line)#exit  
  
CustomerRouter(config)#enable secret Cisco@123  
  
CustomerRouter(config)#exit  
  
CustomerRouter#exit
```

ISP Switch

```
Switch>enable  
  
Switch#configure terminal  
  
Switch(config)#hostname ISPSwitch-SujalRT  
  
ISPSwitch-SujalRT (config)#banner motd $ !!! UNAUTHORIZED  
ACCESS IS PROHIBITED !!! $  
  
ISPSwitch-SujalRT (config)#line con 0  
  
ISPSwitch-SujalRT (config-line)#password sujalrt  
  
ISPSwitch-SujalRT (config-line)#login  
  
ISPSwitch-SujalRT (config-line)#exit  
  
ISPSwitch-SujalRT (config)#enable secret rtsujal@  
  
ISPSwitch-SujalRT (config)#exit  
  
ISPSwitch-SujalRT#exit  
  
ISPSwitch-SujalRT#copy run startup-config
```

May 2023 – Semester 2

### ISP Router

```
Router>enable

Router#show running-config

Router#show startup-config

Router#configure terminal

Router(config)#hostname ISPRouter-SujalRT

ISPRouter-SujalRT(config)#banner motd $ !!! UNAUTHORIZED
ACCESS IS PROHIBITED !!! $

ISPRouter-SujalRT (config)#line con 0

ISPRouter-SujalRT (config-line)#password rtsujal

ISPRouter-SujalRT (config-line)#login

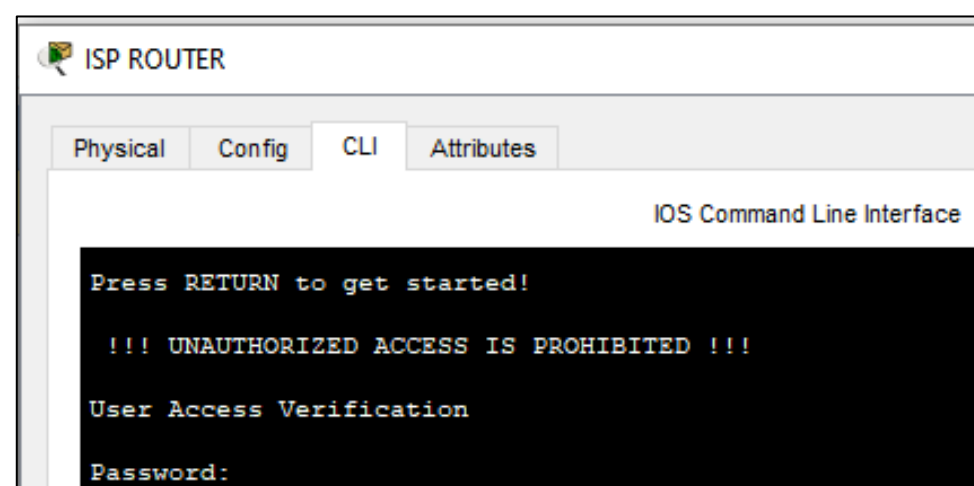

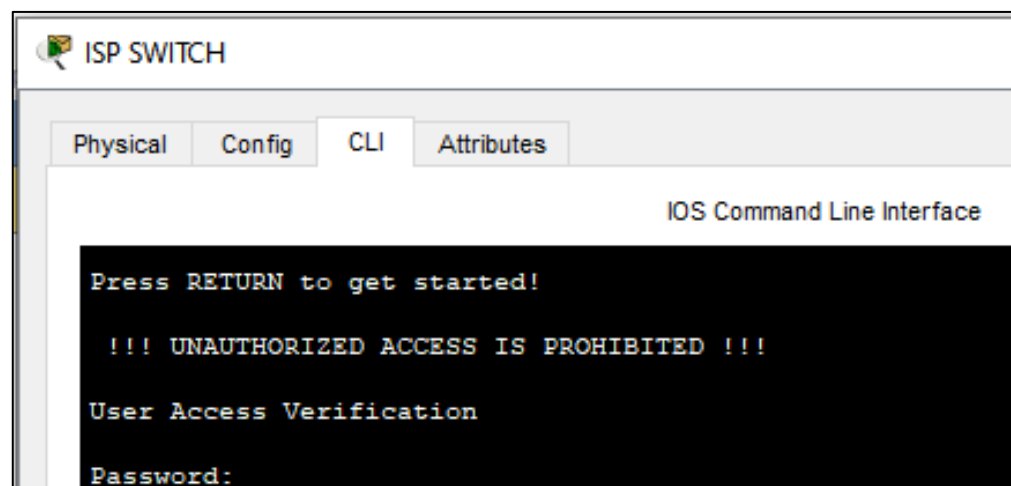

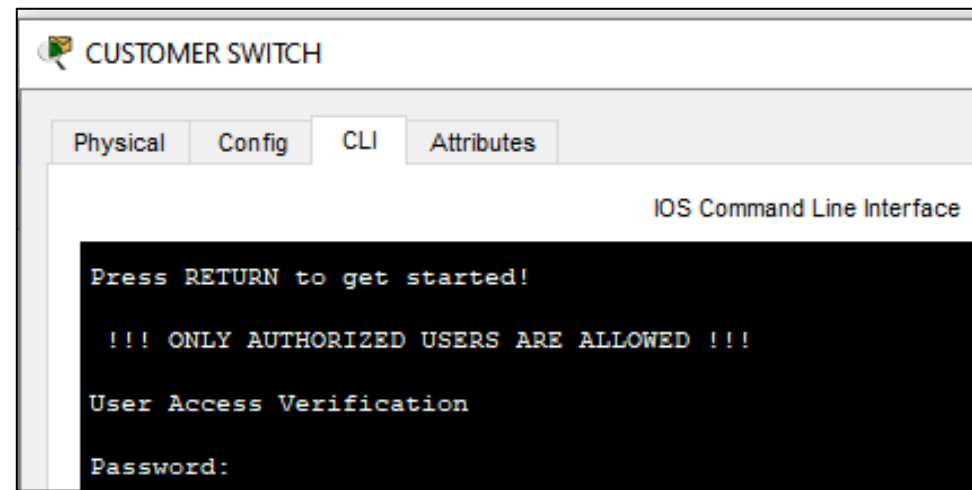

ISPRouter-SujalRT (config-line)#exit

ISPRouter-SujalRT (config)#enable secret rt@sujal

ISPRouter-SujalRT (config)#exit

ISPRouter-SujalRT#exit
```

May 2023 – Semester 2

### Laboratory 4: LAN & MAN Communication Thursday, June 15, 2023

**Design a MAN network with two different LAN network and PCs of one network able to share data to another network.**

Necessary Equipment's

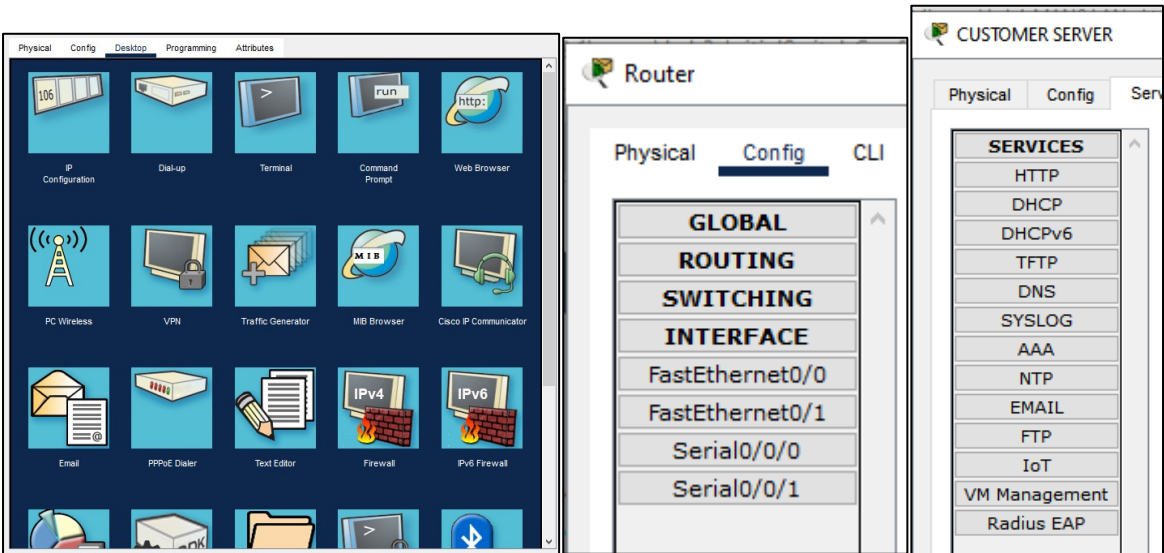

2× 1841 Router's, 2× 2960-24TT Switches, 2× PC-PT's, 2× Server-PT's, 2× Connecting Cable Wires (Copper Straight Through, Serial DTE, Console)

#### Procedure:

- Took 2 PC's, 2 switches, 2 server's, 2 router's
- Divided one of each device (network and end-user) to ISP and Customer sides
- Used copper straight through cable to connect end-user devices like pc and server to switch on both sides as well as switches to router
- Used serial cable to connect two routers, and console cable to connect pc directly to routers
- Managed the interfaces in the devices such as copper fast ethernet and serial ports.
- Manually entered the Static IP Addresses to each device on both networks
- Using IP Configuration on Desktop (GUI) PC and Server, Interface on Config Tab for Routers.
- Class C Private IPv4 on Customer Network (192.168.x.x) and Class C Public IPv4 on ISP Network
- Routers are connected with Class C PUBLIC IPv4 (209.165.20.x)
- Then servers are opened and then the services were configured.

May 2023 – Semester 2

Table

Customer Network:

Device	Port Interface	Cable	IP
Customer PC	Fa0	Copper Straight-Through	192.168.1.2/24
Customer Switch	Fa0/1		
Local Server	Fa0	Copper Straight-Through	192.168.1.3/24
Customer Switch	Fa0/2		
Customer Switch	Fa0/24	Copper Straight-Through	192.168.1.1/24 (Default Gateway)
Customer Router	Fa0/0		

ISP Network:

Device	Port Interface	Cable	IP
ISP Workstation	Fa0	Copper Straight-Through	192.168.10.2/24
ISP Switch	Fa0/1		
ISP Server	Fa0	Copper Straight-Through	192.168.10.3/24
ISP Switch	Fa0/2		
ISP Switch	Fa0/24	Copper Straight-Through	192.168.10.1/24 (Default Gateway)
ISP Router	Fa0/0		

Router:  
Sujal Ratna Tuladhar

May 2023 – Semester 2

Device	Port Interface	Cable	IP
ISP Router	Se0/0/0	Serial DCE	10.10.10.10/8
Customer Router	Se0/0/0	Serial DTE

May 2023 – Semester 2

May 2023 – Semester 2

### Laboratory 5: WEB/DNS & ACL Friday, July 28, 2023

**Design a network where one should be able to access Web server (192.168.0.1) using the browser. Also, following access control criteria should be fulfilled.**

- Internet Host should be able to ping any device in the network, except HR1 or HR server.
- Internet Host should be able to access Web server (192.168.0.3) using the browser.
- Internet Host should not be able to access either the HR server (192.168.40.1) or Sales server (192.168.10.2) using the browser.
- HR2 should be able to access HR server (192.168.40.1) using ping or the browser.
- RandD2 should not be able to access HR server (192.168.40.1) using ping or the browser.

Necessary Equipment's

Router's and 5 Switch's, Cluster (made by 2 Routers), PC's and 4 Server's 20, Connecting Wires (Copper Straight-Through, Copper Cross-Over and Serial DTE)

May 2023 – Semester 2

## ACL

Create the access list (standard or extended)

Apply to interface (inbound or outbound)

Standard acl (1-99) – closest to the destination, Denies or permits source ip address

Extended acl (100-199) – closest to the source, denies or permit source or destination p address, port (service)

```
Router>en
```

```
Router#conf t
```

```
Router(config)#hostname R2
```

```
R2(config)#access-list 1 deny 192.168.0.3 0.0.0.0
```

```
R2(config)#access-list 1 permit any
```

```
R2(config)#int fa3/0
```

```
R2(config-if)#ip access-group 1 out
```

```
Router>en
```

```
Router#conf t
```

```
Router(config)#hostname R1
```

```
R1(config)#access-list 3 deny 192.168.0.3 0.0.0.0
```

```
R1(config)#access-list 3 permit any
```

```
R1(config)#int fa0/0
```

```
R1(config-if)#ip access-group 3 out
```

Laboratory 10: Acquired Network Subnet LAN Connectivity    Sunday, 23 July, 2023

Design an IP addressing scheme and assign IP Addresses to Network Devices and Verify Connectivity in below network. Given the network address of 192.168.100.0/24 to subnet and provide the IP addressing for the network shown in the topology. Each LAN in the network requires enough space for, at least, 25 addresses for end devices, the switch and the router. The connection between R1 to R2 will require an IP address for each end of the link.

Before Subnet:

Short IP Address:	192.168.100.0 /24
Binary ID:	1100000010101000011001000000000
IP Class:	C
CIDR Notation:	/24
IP Type:	Private
Subnet Mask:	255.255.255.0
Binary Subnet Mask:	11111111.11111111.11111111.00000000
Network Address:	192.168.100.0
Usable Host IP Range:	192.168.100.1 - 192.168.100.254
Broadcast Address:	192.168.100.255
Total Number of Hosts:	256
Number of Usable Hosts:	254

May 2023 – Semester 2

Wildcard Mask:	0.0.0.255
----------------	-----------

After Subnet:

For Each LAN

Short IP Address:	192.168.100.0 /27
Binary ID:	11000000101010000110010000000000
Total Number of Hosts:	32
Number of Usable Hosts:	30
Subnet Mask:	255.255.255.224
Binary Subnet Mask:	11111111.11111111.11111111.11100000
Wildcard Mask:	0.0.0.31

All 8 of the Possible /27 Networks for 192.168.100.0

Network Address	Usable Host Range	Broadcast Address:
192.168.100.0	192.168.100.1 - 192.168.100.30	192.168.100.31
192.168.100.32	192.168.100.33 - 192.168.100.62	192.168.100.63
192.168.100.64	192.168.100.65 - 192.168.100.94	192.168.100.95
192.168.100.96	192.168.100.97 - 192.168.100.126	192.168.100.127
192.168.100.128	192.168.100.129 - 192.168.100.158	192.168.100.159
192.168.100.160	192.168.100.161 - 192.168.100.190	192.168.100.191
192.168.100.192	192.168.100.193 - 192.168.100.222	192.168.100.223
192.168.100.224	192.168.100.225 - 192.168.100.254	192.168.100.255

May 2023 – Semester 2

May 2023 – Semester 2

**Laboratory 7: Basic Linux Command****Thursday, July 20, 2023**

Launch “Terminal” in Kali-Linux.

Explore the following commands:

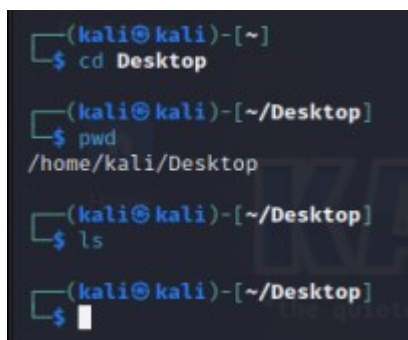

ls (list of all directory content) – what we have

pwd (print working directory) -tell current location and output directory name

cd (used to navigate between directories and folders //case sensitive)

May 2023 – Semester 2

cd .. (variations/ go back to previous directory)

```
(kali@kali)-[~]
$ cd Desktop

(kali@kali)-[~/Desktop]
$ pwd
/home/kali/Desktop

(kali@kali)-[~/Desktop]
$ ls

(kali@kali)-[~/Desktop]
$ cd ..

(kali@kali)-[~]
$
```

cd / (variations/ go to root directory, windows equivalent is C drive)

```
(kali@kali)-[~/Desktop]
$ cd ..

(kali@kali)-[~]
$ cd /

(kali@kali)-[/]
$ pwd
/

(kali@kali)-[/]
$ ls
bin      etc          initrd.img.old  lib64      media  proc  sbin    sys  var
boot     home         lib             libx32     mnt    root  srv     tmp  vmlinuz
dev      initrd.img  lib32           lost+found  opt    run   swapfile  usr  vmlinuz.old
```

view username go back to start

```
(kali@kali)-[/]
$ cd home

(kali@kali)-[/home]
$ ls
kali

(kali@kali)-[/home]
$ cd kali

(kali@kali)-[~]
$ ls
Desktop  Documents  Downloads  Music  Pictures  Public  Templates  Videos
```

man (call the manual)

May 2023 – Semester 2

```
MAN(1) Manual pager utils MAN(1)
NAME
  man - an interface to the system reference manuals

SYNOPSIS
  man [man options] [[section] page ...] ...
  man -k [apropos options] regexp ...
  man -K [man options] [section] term ...
  man -f [whatis options] page ...
  man -l [man options] file ...
  man -w|-W [man options] page ...

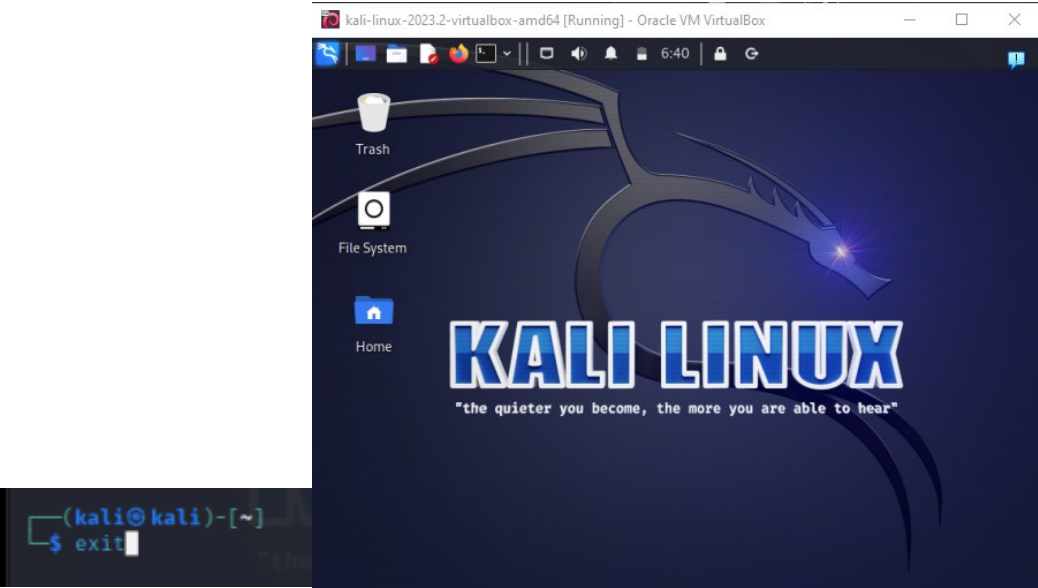

DESCRIPTION
  man is the system's manual pager. Each page argument given to man is normally the
  name of a program, utility or function. The manual page associated with each of these
  arguments is then found and displayed. A section, if provided, will direct man to
  look only in that section of the manual. The default action is to search in all of
  the available sections following a pre-defined order (see DEFAULTS), and to show only
  the first page found, even if page exists in several sections.

  The table below shows the section numbers of the manual followed by the types of pages
  they contain.

  1 Executable programs or shell commands
  2 System calls (functions provided by the kernel)
  3 Library calls (functions within program libraries)
  4 Special files (usually found in /dev)
  5 File formats and conventions, e.g. /etc/passwd
  6 Games

Manual page man(1) line 1 (press h for help or q to quit)
```

exit (end current session and close terminal) – CTRL+D

May 2023 – Semester 2

To get more information on each of the command, you can:

man ls

```
LS(1) User Commands LS(1)
NAME
  ls - list directory contents
SYNOPSIS
  ls [OPTION]... [FILE]...
DESCRIPTION
  List information about the FILES (the current directory by default).  Sort entries al-
  phabetically if none of -cftuvSUX nor --sort is specified.

  Mandatory arguments to long options are mandatory for short options too.

  -a, --all
      do not ignore entries starting with .
  -A, --almost-all
      do not list implied . and ..
  --author
      with -l, print the author of each file
  -b, --escape
      print C-style escapes for nongraphic characters
  --block-size=SIZE
      with -l, scale sizes by SIZE when printing them;  e.g., '--block-size=M';  see
      SIZE format below
```

ls --help

```
(kali@kali)-[~/Desktop]
$ ls --help
Usage: ls [OPTION]... [FILE]...
List information about the FILES (the current directory by default).
Sort entries alphabetically if none of -cftuvSUX nor --sort is specified.

Mandatory arguments to long options are mandatory for short options too.
-a, --all                do not ignore entries starting with .
-A, --almost-all        do not list implied . and ..
--author                 with -l, print the author of each file
-b, --escape              print C-style escapes for nongraphic characters
--block-size=SIZE        with -l, scale sizes by SIZE when printing them;
                          e.g., '--block-size=M';  see SIZE format below
-B, --ignore-backups     do not list implied entries ending with ~
-c                        with -lt: sort by, and show, ctime (time of last
                          modification of file status information);
                          with -l: show ctime and sort by name;
                          otherwise: sort by ctime, newest first
-C                        list entries by columns
--color[=WHEN]           color the output WHEN; more info below
-d, --directory          list directories themselves, not their contents
-D, --dired              generate output designed for Emacs' dired mode
-f                        list all entries in directory order
-F, --classify[=WHEN]   append indicator (one of */=>@|) to entries WHEN
                          likewise, except do not append '*'
--format=WORD             across -x, commas -m, horizontal -x, long -l,
                          single-column -1, verbose -l, vertical -C
--full-time              like -l --time-style=full-iso
```

May 2023 – Semester 2

## Tasks

Using mkdir command, create a new directory with name of “Name\_Lab07”

Using ls command, list the new file created

```
(kali㉿kali)-[~]  
$ pwd  
/home/kali  
  
(kali㉿kali)-[~]  
$ ls  
Desktop  Documents  Downloads  Music  Pictures  Public  Templates  Videos  
  
(kali㉿kali)-[~]  
$ mkdir SujalRTuladhar_LAB07  
  
(kali㉿kali)-[~]  
$ ls  
Desktop  Downloads  Pictures  SujalRTuladhar_LAB07  Videos  
Documents  Music      Public    Templates
```

May 2023 – Semester 2

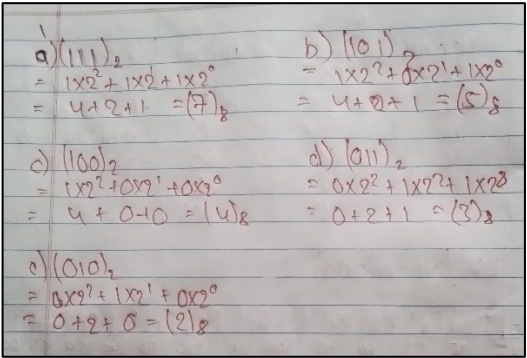

Laboratory 8: Linux File Permissions

Friday, July 21, 2023

THEORY EXERCISE

Convert the following binary (base 2) numbers to octal (base 8):

- 111
- 101
- 100
- 011
- 010

In binary and octal numbering, how do you express granting read, write and execute permission to the Owner of a file and no permissions to anyone else?

2 Binary and Octal numbering can be used to represent file permissions. Octal used to represent specific file permissions.

a first digit :- owner permissions  
b second digit :- group permissions  
c third digit :- other users

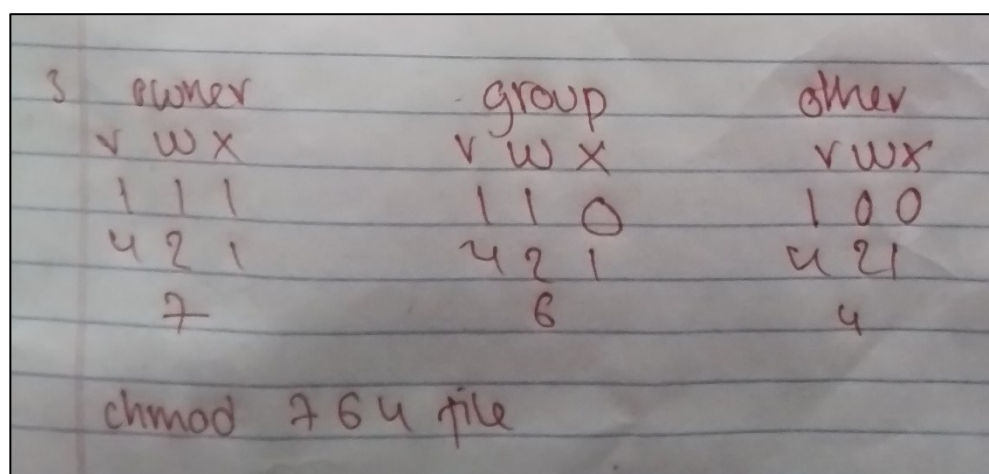

r(read) : 4, w(write) : 2, x(execute) : 1

Owner	group	other
rwx	rwx	rwx
1 1 1	0 0 0	0 0 0
4 2 1	4 2 1	4 2 1
7	0	0

chmod of Desktop  
touch file1  
ls -l file1  
chmod 000 file1  
ls -l  
chmod 700 file1  
ls -l

In binary and octal numbering, how do you express granting write, and execute permission to the Owner of a file, read and write permission to Group, and read permissions to Other?

May 2023 – Semester 2

### LAB EXERCISE

Create a file using touch command:

```
(kali@kali)~$ pwd
/home/kali

(kali@kali)~$ ls
Desktop  Downloads  Pictures  SujalRTuladhar_LAB07  Videos
Documents  Music      Public    Templates

(kali@kali)~$ cd Desktop

(kali@kali)~/Desktop$ pwd
/home/kali/Desktop

(kali@kali)~/Desktop$ ls

(kali@kali)~/Desktop$ touch Lab8SujalRT
```

Type `ls -l` commands to view the file permission.

```
(kali@kali)~/Desktop$ ls -l
total 0
-rw-r--r-- 1 kali kali 0 Jul 22 07:43 Lab8SujalRT
```

Type the following commands to change the permission of the file.

```
(kali@kali)~/Desktop$ chmod 777 Lab8SujalRT
```

Review the permission of the file using the `ls -l` command.

```
(kali@kali)~/Desktop$ ls -l
total 0
-rwx----- 1 kali kali 0 Jul 22 07:43 Lab8SujalRT
```

Using `chmod` command, grant the permission accordingly.

May 2023 – Semester 2

Grant read, write and execute permission to the Owner of a file and no permissions to anyone.

OWNER			GROUP			OTHERS		
R	W	X	R	W	X	R	W	X
1	1	1	0	0	0	0	0	0
4	2	1	4	2	1	4	2	1
7			0			0		

```
(kali@kali)-[~/Desktop]
$ chmod 700 Lab8SujalRT

(kali@kali)-[~/Desktop]
$ ls -l
total 0
-rwx----- 1 kali kali 0 Jul 22 07:43 Lab8SujalRT
```

Grant read, write, and execute permission to the Owner of a file, read and write permission to Group, and read permissions to Other.

OWNER			GROUP			OTHERS		
R	W	X	R	W	X	R	W	X
1	1	1	1	1	0	1	0	0
4	2	1	4	2	1	4	2	1
7			6			4		

```
(kali@kali)-[~/Desktop]
$ chmod 764 Lab8SujalRT

(kali@kali)-[~/Desktop]
$ ls -l
total 0
-rwxrw-r-- 1 kali kali 0 Jul 22 07:43 Lab8SujalRT
```

**Saturday, July 22, 2023**

## Laboratory 9: Creating User Account in LINUX

22013230 | 0362483

May 2023 – Semester 2

Try adding a new user with <useradd>

useradd [use a different username to 1]

```
(root@kali)-[/home/kali]
# useradd SRT
```

What is the difference between adduser and useradd?

The ‘adduser’ is much similar to useradd command, because it is just a symbolic link to it.

Access /etc/passwd file (1%)

```
chew_sess2:$6$/j4xdhoIjBtU42Zo$KIT2U1REfbWTTt/dXXqNAys2HDTvrvTvy/Ek4JjgJyCnQRk/hAVu0LZm.NxV7fkHPsfI1EIQjAm8gRPIudD1:19311:0:99999:7:::
```

```
(root@kali)-[/home/kali]
# access /etc/passwd file
Command 'access' not found, did you mean:
  command 'kaccess' from deb plasma-desktop
Try: apt install <deb name>

(root@kali)-[/home/kali]
# access /etc/passwd
Command 'access' not found, did you mean:
  command 'kaccess' from deb plasma-desktop
Try: apt install <deb name>

(root@kali)-[/home/kali]
# /etc/passwd
zsh: permission denied: /etc/passwd
```

Sudo nano /etc/passwd

Find the new user that you have created.

```
(root@kali)-[/home/kali]
# sudo nano
```

Explain the meaning for each of the information that are separated with semicolon “:”.

```
hahatest:x:1002:1002:zcxv,asdf,wqer,1234,zxcv:/home/hahatest:/bin/bash
```

Access /etc/shadow file (1%)S

Sudo nano /etc/shadow

May 2023 – Semester 2

What is the information stored in shadow file?

```
(root@kali)-[/home/kali]
# sudo nano

(root@kali)-[/home/kali]
# passwd sujal
New password:
Retype new password:
Sorry, passwords do not match.
passwd: Authentication token manipulation error
passwd: password unchanged
```

Changing password of a user. (1%)

Passwd [username]

```
(root@kali)-[/home/kali]
# passwd sujal
New password:
Retype new password:
passwd: password updated successfully
```

whoami

Access /etc/shadow file again, and notice the difference.

Switch the current user to the new user account that you have just created. (1%)

Su [username]

```
(root@kali)-[/home/kali]
# /etc/shadow
zsh: permission denied: /etc/shadow

(root@kali)-[/home/kali]
# su SRT
$
$ whoami
SRT
$ █
```

```
$
$ su sujal
Password:
(sujal@kali)-[/home/kali]
$ █
```
